

STORAGE OF HAZARDOUS PRODUCTS AND WASTE

Integral and safe waste solutions.

At Hidronor we have taken care of the treatment responsible for industrial waste in Chile for more than 25 years.

We rely on authorized warehouses for temporary storage, which allow us to provide our clients with the waste storage service of diverse characteristics of hazardousness, as:

- Inflammability.
- Toxicity.
- Corrosivity.
- Reactivity.

Service

STORAGE OF HAZARDOUS PRODUCTS AND WASTE

DESCRIPTION

Service run by qualified personnel with experience in the management, storage and exportation of hazardous waste according to the current standards.

CHARACTERISTICS

We have three types of temporary waste storage according to DS 148, with sectoral authorization given by the Health Service.

1. Inflammable waste

Storage classification 3.1, 3.2 and 3.3 (as oils, solvents, fuel, sprays, among others).

2. Non-flammable waste

Temporary storage for corrosive, reactive and toxic waste due to the contents of organic, inorganic substances and/or leaching (acids, drugs, toxic RILs, spent caustics, among others).

3. PCBs and POPs

Storage of Polychlorinated Biphenyls (askarel), pesticides, halogenated and non-flamables waste destined to be incinerated abroad.

BENEFITS

- Delivers a temporary storage service environmentally authorized in compliance with the current legislation DS148.
- Quick response to specific contingencies that could occur in any geographical location of the country.
