

## REMEDICATION AND SANITATION OF CONTAMINATED LANDS

Solutions that contribute to the country's sustainable growth.

At Hidronor we care for the environment providing integral solutions for the remediation and sanitation of environmental liabilities and contaminated lands.

We contribute value to reduce the major impacts of industrial activity caused by accidental spilling, transport and storage of hazardous substances, among others

Service

# REMEDIATION AND SANITATION OF CONTAMINATED LANDS

## DESCRIPTION

Recover the quality of contaminated soil through on-site sampling, determining the hazardousness and major waste pollutants in order to apply the adequate treatment for the compliance of hazardous waste decree DS 148.

The process consists in the removal of pollutants from the environment which are safely transferred for their subsequent treatment and final disposal.

## CHARACTERISTICS

- Sampling and trials , analysis, removal, treatment and/or recovery of contaminated areas.
- Analytic controls assuring land decontamination.
- Land remediation and its return in optimal conditions for its subsequent use.

## BENEFITS

• Soil contamination reduction derived from industrial processes will generate risks and adverse effects in the environment and the people's health, if not managed in time.

• Quick recovery of soil quality for its diverse use, as in industries, agriculture and housing, among others.
